

Biodiversity Principles

Evolugen is committed to sustainable use and preservation of natural resources for future generations. Consistent with this commitment, we recognize the importance of protecting and enhancing natural ecosystems and biodiversity through the development, operation and decommissioning of our facilities.

Biodiversity and ecosystem conservation considerations are integrated into our decision-making and throughout the lifecycle of our operations. Accordingly, the following principles guide our conduct:

- 1 PLAN**
Evolugen assesses the environment to determine ecological sensitivities and the impacts, actual or potential, of our activities at the onset of any project.
- 2 AVOID**
Evolugen seeks to avoid, where possible, and otherwise minimizes identified, actual or potential, impacts to the environment as a result of our construction and operations.
- 3 CONTROL**
Evolugen implements mitigation, management and monitoring efforts, seeking opportunities to enhance local biodiversity, prioritizing sites in sensitive areas.
- 4 ENGAGE**
As a good corporate citizen and neighbour, Evolgen engages with other stewards of the environment, government, local communities, Indigenous Peoples and organizations to promote sustainable use of natural resources and biodiversity and continues to raise awareness with employees of the importance of the environment in and around our operations.
